ABSTRACT OF THE DISCLOSURE

10

A variety of clip-on and self-adhesive sparking pads for skateboards that generate sparks when the pads come in contact with a hard surface, such as cement, asphalt, or metal. Each sparking pad is adhesively applied to the underside of the skateboard and is made in various shapes and sizes to conform to the different areas of the skateboard and skateboard trucks. The sparking pad that fits the trucks or axles can either be self-adhesive or fashioned to clip over the ends of the axle. A plurality of flint or flint-like contact members are embedded in the plastic pad to provide multiple contact points, thereby creating a shower of sparks on contact.
